General

The aitronic App **aInventur** is used for demonstrating barcode scanners and/or RFID readers and can be used for simple inventories.

In order to use the app with barcode scanner and/or RFID reader

- the app **devin** must be installed and enabled and
- in **devin** under section "Processing" "Broadcast" must be activated.

devin is not installed.

devin is not enabled or not active.

If devin can not be installed with the app max. 20 articles.

Start Screen

Selection of screen **Menu**

Selection of screen **Article Master Data**

Selection of screen **Data Collection**

Selection of screen **List**

Selection of screen **Synchronization**

Menu

Selection of screen **Settings**

Selection of screen **Info**

Displaying the Licence Agreement

Info

Displays the app version, article and serial number of the device and the IMEI

Verifiy whether a new version of the app is available to install. This requires an Internet connection.

Settings

If this option is selected, the quantity is scaled up when scanning the same item numbers.

If this option is selected, the data is synchronized with FTP instead of with MTP. The appropriate FTP settings must be made for this.

Article Master Data

Optionally, the loading of article master data can be done with the Windows software MTPWin. When product master data is loaded, the article description is displayed for each item number entered.

After synchronizing with MTPWin, the article master file can be imported. If there is no file, a corresponding error message is displayed.

After import, the article master data is displayed.

After query / confirmation the article master data will be deleted.

Items can be added manually.

Data Collection

Selection of screen **List**.

The item number can be scanned or entered manually.

The default quantity "1" can be incremented, decremented, or manually changed. When scanning the next barcode, the current record is automatically saved.

Manually store the current record.

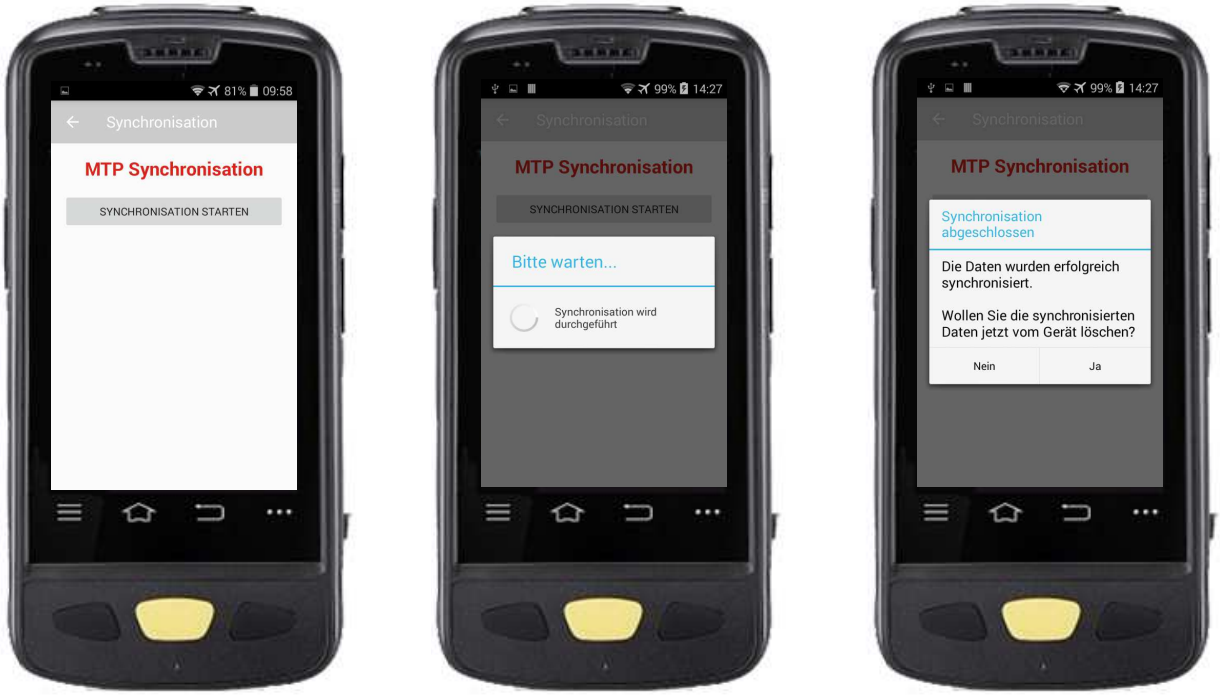
Synchronization

For synchronization,

- the Windows software MTPWin must be started on the computer,
- MTPWin has to be configured accordingly (refer to MTPWin Operating Manual),
- the device must be connected to the USB port of the computer with Snap On or Cradle and
- the USB PC connection must be set to "Media Device (MTP)".



After tapping the button "START SYNCHRONIZATION", synchronization is performed. After the synchronization has been completed, the system asks whether the data on the device is to be deleted.
